FEATURED PROJECTS

Charkoots Python | React | Flask | PostgreSQL   LIVE | README
A web application to build and customize charcuterie board with wine pairing
- Constructed a pairing algorithm API to dynamically render wine selection based on dominant taste profile of selected items, allowing users to find the perfect wine
- Implemented a user-friendly navigation experience via featuring Material-UI's drawer component, which enables users to easily interact with application's available functionalities

Codezvous Python | React | Redux | PostgreSQL   LIVE | README
A niche event sharing application for programmers to browse and attend coding-related events
- Formulated a full-scale seeder data using Faker and random package to yield data efficiently
- Implemented personalized landing page display of joined groups and attending events based on user's app interaction via React's useEffect hooks

GoodLaughs JavaScript | Express | Pug | PostgreSQL | Heroku   LIVE | README
An application inspired by Goodreads to post and share jokes with other users
- Orchestrated interactive components and Express API routes for users to curate personal feeds, leave comments and reviews to promote to promote flexible social networking experience
- Programmed a Express session middleware to handle user validation and authentication
